Time loop - Wikipedia A time loop or temporal loop is a plot device in which periods of time are repeated and re-experienced by the characters, and there is often some hope of breaking out of the cycle of repetition. Time loop is sometimes used to refer to a causal loop; although they appear similar, causal loops are unchanging and self-originating, whereas time loops are constantly resetting: when a certain. ~School Loop Inc. Make changes to the header and footer on the "Edit Header and Footer" tab on the left. Open-loop controller - Wikipedia In an open-loop controller, also called a non-feedback controller, the control action from the controller is independent of the "process output", which is the process variable that is being controlled. It does not use feedback to determine if its output has achieved the desired goal of the input command or process "set point".. There are a large number of open loop controls, such as on/off.
